

Front End Engineer

Loop is redefining e-commerce by automating the work of returns for businesses and providing our customers with a simple way to return or exchange products online. We are a growing B2B SaaS company focused on solving the biggest pain point in e-commerce, product returns. Our team has developed a consumer application that supports top e-commerce brands like Allbirds, Chubbies and BuzzFeed. Joining Loop means becoming an essential part of all of these brands' businesses. We're a close-knit team of ten, and growing! Loop is seeking a Front End Engineer who has empathy for the end user and wants to be part of an early stage company. You go all in. You want to do your best work, and have that work make an impact.

Our Front End Engineers at Loop Returns are self-driven, and excited about the challenge of working in a high performing, improvement driven culture on a product built on the foundation of Laravel and Vue.js. We're at a critical point in our development, building a platform that will serve thousands of merchants and millions of end users. We're looking for a strong track record of architecting and building products. With that said, we're not looking for a 100% match on experience or our stack. If you have a history of shipping solid work, we're interested.

Responsibilities:

- Maintaining, refining and expanding on the core Loop returns customer portal using the HTML, CSS, JavaScript, preprocessors and Vue web stack.
- Working with QA to write requirements and communicate issues.
- Owning your technical stories and assignments- from writing code, clarifying requirements, meeting project timelines, and delivering high-quality, features.
- Collaborating with designers to develop beautiful interfaces for new features and new Loop services.
- Identify and challenge established organizational limitations, and offer solutions.
- Consistently improve the speed, reliability, and performance of the core Loop application.
- Evaluate new technologies and help determine opportunities to leverage these for new product lines, features and platform advancements.

Position Requirements:

- Strong - 3 -5 years - core JavaScript experience.
- Good understanding of the web technology fundamentals: HTTP, SSL, JSON and RESTful services.
- Understanding of at least one JS Framework and the associated best practices.
- Strong CSS skills with an eye for performance and responsive design.
- Strong communication skills with the ability to adjust to fit the audience.
- Ability to prioritize workloads to meet deadlines and to take initiative and responsibility.
- Local to Columbus, Ohio or willing to relocate

Location:

Loop is located in the heart of the Brewery District in beautiful downtown Columbus, Ohio. We enjoy a wide variety of great restaurants, bars, coffee shops, parks and other points of interest within walking distance.

Benefits:

- We offer medical/dental/vision insurance, a great vacation policy and an evolving remote work policy.
- We also offer a supportive environment that empowers you to contribute and influence the company day one.
